LAWNSOUTIONS AUSTRALIA CITTO CITTO

100% AUSTRALIAN OWNED

GREAT FOR:

TREATING PESTS SUCH AS APHIDS, BUGS, CATERPILLARS, HELIOTHIS, LEAFHOPPERS, GRASSHOPPERS, THRIPS OR ARMY WORMS. GRUB GUARD IS THE TOTAL SOLUTION, WITH AN EASY SPRAY-ON APPLICATOR.

Unlike any other product currently available on the market, **Grub Guard** will kill off the larva of lawn grubs, not just the hatched pupae. For this reason, **Grub Guard** can be used as a preventative as it can be applied when the moths appear, prior to the actual attack of the grubs, thus preventing some of the foliage damage.

HOW IT WORKS

Esfenvalerate is a voltage-dependent sodium-channel agonist. Esfenvalerate works against the insect/arthropod nervous system, resulting in repetitive firing of neurons. When the organism is exposed to Esfenvalerate, it may exhibit symptoms of hyperexcitation, tremors, convulsions, followed by lethargy, and paralysis. Following paralysis the insect/arthropod dies. The mode of entry of Esfenvalerate into the insect/arthropod is either via contact or through ingestion. Direct contact with spray droplets provides the most effective method of control.

APPLICATION:

For Home Garden: **Grub Guard** comes in a handy ready-to-use 2L trigger pack which covers 150m2.

Apply at the first sign of pest infestation and before pest populations build up to damaging levels. Ensure thorough coverage of infested leaves and stems.

Maintenance Treatment: Repeat treatment if pests reappear or repeat treatment at 3 month intervals to prevent re-infestation

PRECAUTIONS:

DO NOT allow chemical containers or spray to get into drains, sewers or ponds. DO NOT spray directly on humans, pets, exposed food, food preparation areas or food utensils. DO NOT spray if bees are feeding on flowers plants; will kill bees. DO cover fish tanks/ponds before using; dangerous to fish. DO NOT feed treated grass clippings to livestock.

Grub Guard

ACTIVE CONSTITUENT:

Contains Esfenvalerate at the rate of 1g/L

Grub Guard contains the active ingredient Esfenvelerate which is a broad-spectrum insecticide toxic to most insects, less toxic to birds, and of minimal toxicity to mammals.

Esfenvalerate has exceptionally low water solubility, is extremely hydrophobic and shows a strong tendency to bind to particulates (organic, clay, and soil).
